

When questioned ~~the~~ there, at Gold Hill City
 waterworks dam, says that the story chain is
 on the Cal. side, at Rocky Point. This is a
 high steep rock-bank; on Calif. side there, & the
 story chain was on edge of water at ~~the~~ ^{the} foot of
 this bank. A man wd. sit on that chain & fish for
 salmon with a dipnet, & soon it wd. be so heavy
 with salmon it wd. take 2 men to lift it out,
 there was a flour mill on the n. side of the
 river then, & the water was led out
 to the flour mill, leaving the channel where
 the story chain was almost dry now. The
 Toll Bridge was just a little downriver of the
 story chain, and Rocky Point was on the
 Calif. side. Tipukhik mt. ran down
 opp. story chain on the Willamette side. When asked
 where Tillo-mik was, says it was a big, open
 place (flat) on s. side of Rogue River up
 of story chain. Says that Rocky Point is
 dr. of the Gold Hill City water works dam
 Gold Hill. Vs. that gold was taken out on
 e. away from river side of top of Gold Hill.
 Velly also tells of river making a big bend
 dr. of us here.

Mr. W. L. Clark says the hill at Gold Hill water
 works dam is gold hill, the hill ^{is} ^{usually}
 called ^{granite} ^{because it is granite formation} ~~the~~ ^{Mr. W. L. Cook} commenting on above says the
 river runs thru a rocky ~~the~~ channel at Rocky Point,
 the bridge is over this channel. But never heard
 of a flour mill at Rocky Pt. The town was & is on
 n. side of river at Rocky Pt. Beacon mt. does not run
 down to Rocky Pt. but, I imagine, it was better, ^{usually}

The line goes only 2 ft. to Rocky Pt.
